RE: Invitation to a Mentorship Webinar on Programming and Energy

Dear Chrispine,

On behalf of Kenyatta University Energy Club, I would like to invite you to a mentorship webinar on the 29th of January 2025 about programming and energy. The title of the webinar is "**Bytes to Watts**."
As mentioned earlier, most of our members learn programming languages while in school without being provided with any context to energy. This mistake then culminates in some of us developing a negative perception towards coding.
Fortunately, with your vast experience in embedded systems, we believe you are the suitable expert to lead us back into the path of coding, in relation to energy. As a club, we would also like to hear you experiences and projects that you have undertaken, if you are in a position to share. As a call to action, you can give us the way forward in this algorithmic journey.
We look forward to your hosting you during this event and other future events.

Yours faithfully,
Mahu Kimutai,
Chairperson, KU Energy Club.
